

Notable Changes

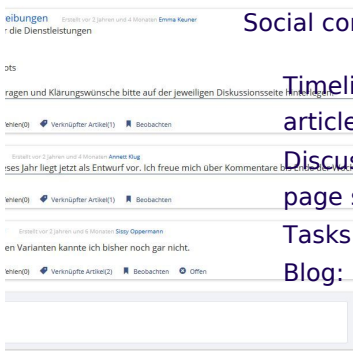

The most important changes coming with BlueSpice3 at a glance.

	<p>A small name change: BlueSpice free will only be called BlueSpice in the future.</p> <p>The commercial versions are still called BlueSpice pro and, brand new, BlueSpice pro farm</p>
	<p>Search: Elasticsearch now works under the hood as a new high-performance standard on the new engine, BlueSpice users get many improvements</p> <p>Autocomplete for search input now also displays similar articles</p> <p>The new, revised SearchCenter offers a simpler display of search results without sacrificing features</p> <p>The search results now also have a preview image</p> <p>Filtering search results has become more powerful and easier at the same time</p> <p>Semantic metadata (from Semantic MediaWiki) can be filtered (faceted) in search results</p> <p>Mark interesting search hits</p> <p>The search results are exportable</p> <p>More: BlueSpice switches over to Elasticsearch - Metadata the new challenges for wiki search engines</p>
	<p>VisualEditor: The Wikipedia editor is now also delivered with BlueSpice.</p> <p>This means more comfort. Technologically, new possibilities open up and a long-term perspective for this tool.</p> <ul style="list-style-type: none"> ■ Stable and sophisticated visual editor ■ New dialogs (e.g. for inserting links...) ■ Integrated handling of templates, footnotes, etc. ■ Integrated functions of BlueSpice (PastelImage, InsertMagic, ...) <p>More: Create texts together: About MediaWiki VisualEditor and simultaneous editing</p>

Social: BlueSpice pro users now have completely new communication rooms! Articles and contributions can now be discussed.

You can follow the discussions, keywords and filter them. And it's all searchable, too. In de Social contains:

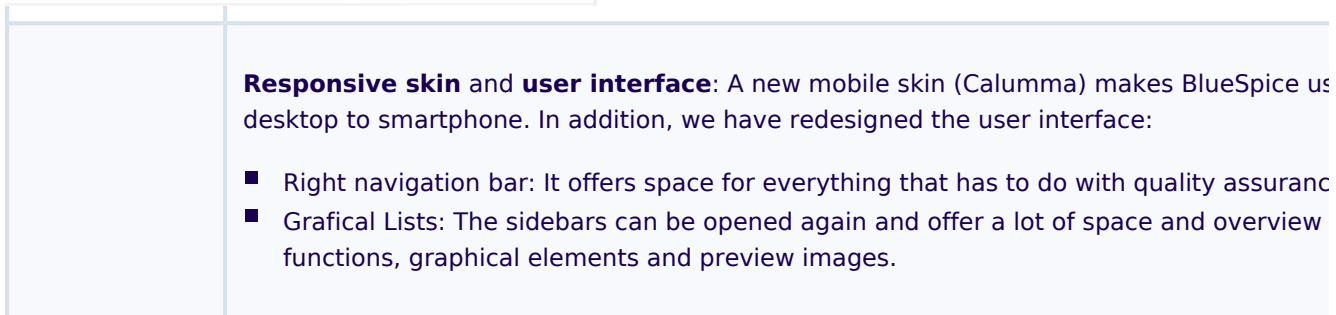

Timeline: View all discussion posts at a glance. You can assign, recommend and follow articles. Of course, all posts in the timeline can be filtered as desired.

Discussions: Hierarchical discussions about an article are now possible. The previous discussion page still exists - for material collections, for example.

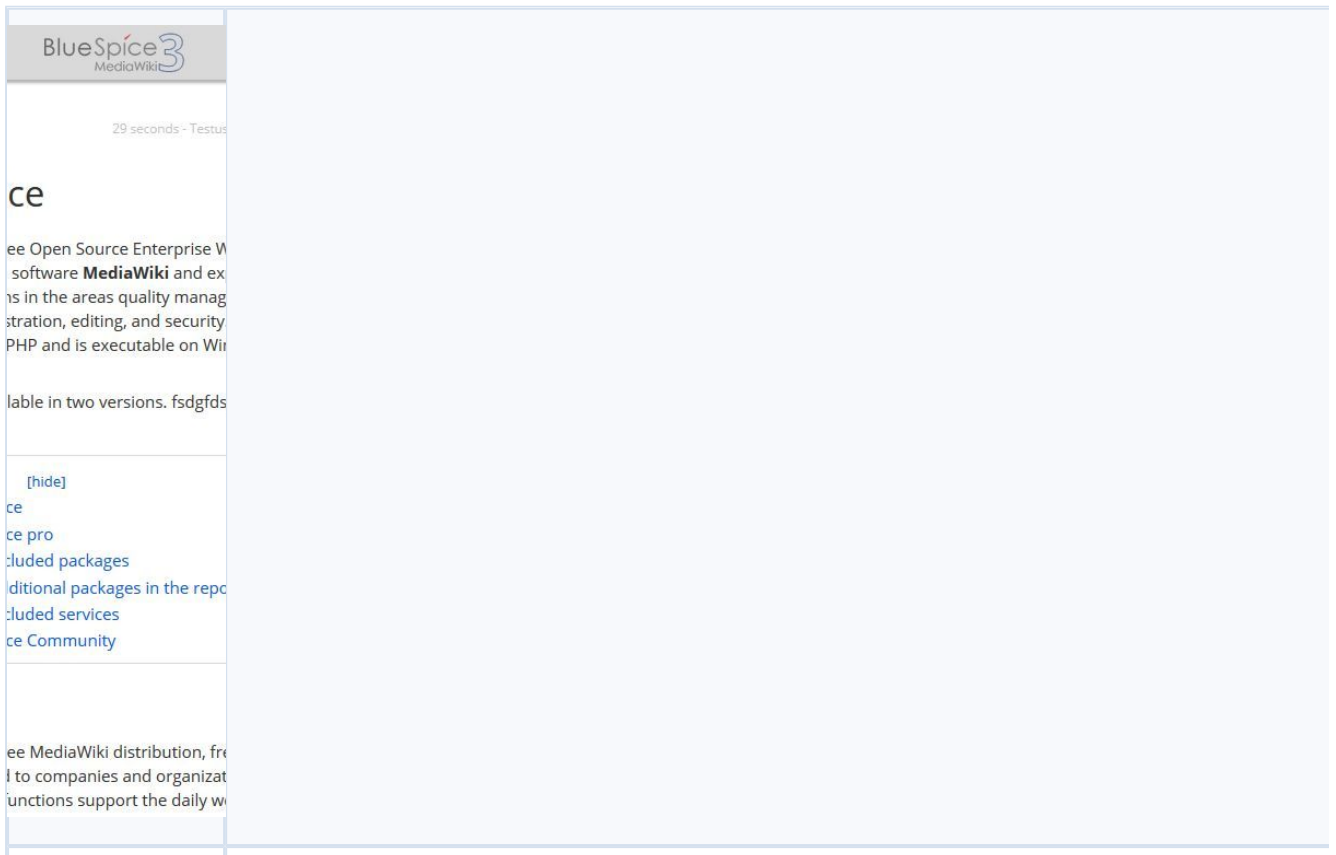

Tasks: You can also mark discussions as closed ("Resolved").

Blog: Blog posts can be published quickly and more comfortable.

Responsive skin and user interface: A new mobile skin (Calumma) makes BlueSpice usable from desktop to smartphone. In addition, we have redesigned the user interface:

- Right navigation bar: It offers space for everything that has to do with quality assurance
- Grafical Lists: The sidebars can be opened again and offer a lot of space and overview functions, graphical elements and preview images.

Rights management: The assignment of rights is considerably simplified. The wiki admin has a standard selection of assignable roles that you can assign to users.

The tedious selection of over 100 individual rights for each roll is no longer necessary.

Simple, pre-configured roles: Reader, Editor, Admin, User, Bot.

Other roles and rights: It's still possible. Our technicians will be happy to set up the right according to your wishes.

Configuration Manager: Instead of "Preferences", admins can now set up the wiki via the configuration manager

- Filter functions by function category (e.g. Skinning, Quality Assurance...), extension name, or function name (e.g. BlueSpice pro farm)
- Search for settings
