

Test functions/Editor

With BlueSpice 3, we replace the previous VisualEditor with the MediaWiki. This VisualEditor is stable and tested on the whole of Wikipedia. There are many features we have been wanting for a long time. One can, for example, edit templates very conveniently.

We also integrate important BlueSpice functions in the new editor. For example, you can insert a "Smartlist". And our technicians implemented the PastelImage function. You can upload images via drag&drop and copy&paste.

Try it out for yourself: Go to the [sandbox](#) or create your own test page now:

Write and format texts and become familiar with the "insert" assistants.
