## 1 Introduction

The industry-independent QM system according to the standard series DIN EN ISO 9000 ff. is equally well suited for manufacturers, service providers, institutions, software developers and suppliers, but especially for:

- **Suppliers** whose customers demand or will demand a QM system in the near future, such as the automotive industry and public sector clients.
- **Healthcare companies and institutions' (hospitals, nursing homes, etc.) for which a QM scheme is required by law.**
- **Manufacturer of products**, where quality defects can lead to high liability risks (product liability law).
- Companies that manufacture products for which a **CE mark** is required by European directives.
- The following QM specifications are in use for **Automotive Suppliers** beyond ISO 9001: 2008:
  - Germany: VDA 6.1, VDA 6.2, VDA 6.4
  - USA: QS-9000
  - worldwide: ISO/TS 16949 (as overarching worldwide standard)
- A separate QM standard is required for medical device manufacturers: EN ISO 13485:2003.

### 1.1. Introduction of a QM system

---

A QM system is introduced according to the following procedure:

1. Beginning of the introduction of the QM system by management decision
2. Name of a QM representative
3. Clarification of the question of whether to engage an external consultant. If so, contact consultants and get information about funding opportunities
4. Creation of a project plan with timelines and steps
5. Early information and involvement of employees
6. Formulating a quality policy with your own quality goals
7. Analysis and definition of [Process descriptions](#)
8. Determining interfaces between the processes
9. Definition of [Role definitions](#)
10. Determining the type of documentation — if necessary, creation of procedural and work instructions
11. Creating a QM manual
12. Introduction and qualification of employees
13. Implementation of internal [Audits](#)
14. Certification
15. Selection of a certifier

## 1.2. Checklist

---

The following **checklist** is used to introduce quality management according to the ISO 9001-2015 standard.

## 2 Quality assurance

**Quality assurance** or **Quality control** is a collective term for different approaches and measures to ensure defined quality requirements.

### Contents

2.1 DIN-Norm .....	7
2.2 Quality assurance process: PDCA .....	7
2.3 Application .....	7
2.4 Multimedia .....	8

## 2.1. DIN-Norm

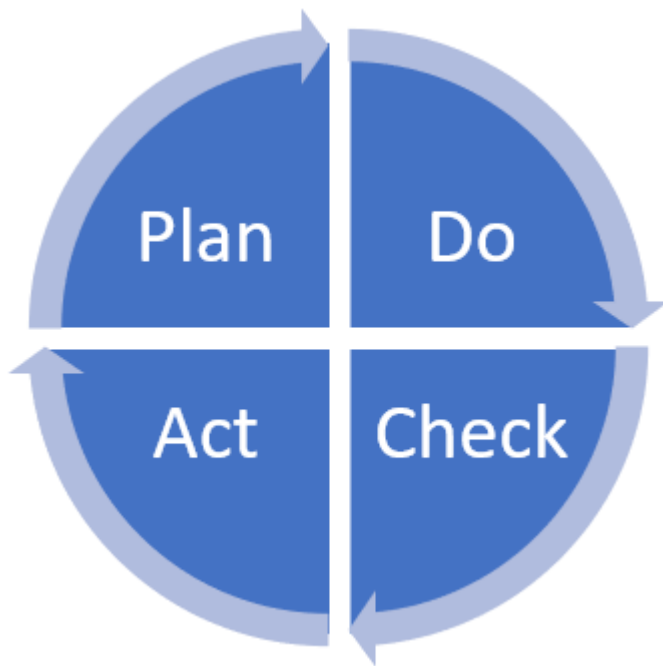

---

According to DIN EN ISO 9000:2015 3.3.6, quality assurance is the part of quality management that aims to create confidence that quality requirements are met.

Quality assurance existed before the term itself came up. Quality assurance became known in German-speaking countries, as companies began to have their quality management system (QMS) certified according to the ISO 9001 standard series established in 1987.

## 2.2. Quality assurance process: PDCA

---

## 2.3. Application

---

The PDCA cycle describes the phases in the continuous improvement process (CIP). CIP is the basis of all quality management systems. As a result, the company is constantly improving processes and produces with the goal of improving the efficiency as well as the customer and employee satisfaction of the company.

In industrial enterprises and in the service sector, it is one of the standard procedures. The KVP and PDCA cycles are fundamental components of the DIN EN ISO 9000, ISO 14000, ISO/IEC 20000 and ISO/IEC 27001 "Information Technology - Security techniques - Information security management systems requirements specification" and in the BSI standard 100-1: *Information security management systems (ISMS)*.

After each PDCA cycle, the measures are to be standardized by a *SDCA* cycle. After each introduction of a defined standard (Standardize), this standard is practiced (Do), the procedure checked for correctness and functionality (Check) and changed if necessary (Action). This action is then usually the planning of another PDCA cycle.

## 2.4. Multimedia

---

A simple and easy to understand explanation of PDCA.
