

Documentation System

Tour 3 [Documentation System](#)

next: [Customer documentation](#)

A **documentation system** supports the company in archiving documents. These systems are of outstanding importance for the company to be able to reproduce processes, decisions and agreements.

Documentation systems are used in project documentation, technical documentation or IT documentation. In order for them to fulfil their purpose, it is necessary to be able to use them to quickly collect, categorize and retrieve information.

Documentation in a wiki

Wikis were developed to centrally collect and organize the knowledge of different experts. They are therefore ideal documentation systems and have long since become the standard documentation system, not least in IT.

- *Collaboration without prior knowledge:* With the visual editor, images can be quickly integrated into an article using "drag & drop".
- *Office documents:* Documents in other formats (Office, PDF etc.) can be attached to an article just as quickly.
- *Creation of structured data:* The documentation can be enriched with structured data (attributes) that can be processed inside and outside the system. (Semantic MediaWiki)
- *Page versioning:* The traceability and reproducibility of all changes in the documentation enable the management of legally required information and, if necessary, safeguard against liability.

Company/Production System (Contract Type: Subscription)

Step-by-step instructions

coffee

er without immediately brewing coffee. Flooding can occur if the tank is filled again afterwards!

IT documentation

rowser's JavaScript console, enter `person` into it, and press `Enter / Return`. You should get a r
lines:

```
t]
```

you've just created your first object. Job done! But this is an empty object, so we can't really do
JavaScript object in our file to look like this:

```
{  
  'Smith'],  
  le',  
  ['music', 'skiing'],  
  on() {  
    s.name[0] + ' ' + this.name[1] +  
    this.age + ' years old. He likes ' +
```

Operating instructions

metal tines (fork) that can be pushed under the pallet. In front of the tines there are small, downwardly extendable rollers. With the load and castors, the lifting tines can be adjusted parallel to the ground with a hydraulic lifting cylinder and a linkage. This way, the pallet can be raised for shipping. The handle is used for driving in non-powered devices as a lever for a hydraulic pump, which feeds the lifting cylinder. On the handle or near the handle there is a marking option for the hydraulic valve (lifting / driving / lowering). Electric pallet trucks follow the operator by means of sensors.

Requirements

A regular UVV test (according to the guidelines of the employers' liability insurance association) is mandatory for an operator. A driving license (driving license) for driving electric pallet trucks is not required if the pallet truck is controlled by a traveling pedestrian. In this case, according to the German Employers' Liability Insurance Ordinance § 7 (2) BGV D27, a driver in the handling of the lift truck is sufficient. The assignment of the driver does not have to be in writing in this case.

Mathematical formula

The response is going to be the derivative of this:

$$\frac{di_{os}}{dt} = 0 + \frac{1}{2}e^{-t}(\cos t + \sin t) - \frac{1}{2}e^{-t}(-\sin t + \cos t)$$

$$e^{-t}(\cos t + \sin t + \sin t - \cos t) = e^{-t} \sin t \cdot I_s = 1 + \cos t$$

$$\int_0^t i_{os}(t - \tau) I_s(\tau) d\tau + C_1$$

$$\int_0^t e^{-(t-\tau)} \sin(t - \tau)(1 + \cos \tau) d\tau + C_1$$

$$\frac{\cos t}{5} + \frac{2 \sin t}{5} - \frac{7e^{-t} \cos t}{10} - \frac{11e^{-t} \sin t}{10} + \frac{1}{2} + C_1$$
