Tour 3 [Documentation System](#)

next: [Customer documentation](#)

A **documentation system** supports the company in archiving documents. These systems are of outstanding importance for the company to be able to reproduce processes, decisions and agreements.

Documentation systems are used in project documentation, [technical documentation](#) or IT documentation. In order for them to fulfill their purpose, it is necessary to be able to use them to quickly collect, categorize and retrieve information.

Documentation in a wiki

Wikis were developed to centrally collect and organize the knowledge of different experts. They are therefore ideal documentation systems and have long since become the standard documentation system, not least in IT.

- *Collaboration without prior knowledge:* With the visual editor, images can be quickly integrated into an article using "drag & drop".
- *Office documents:* Documents in other formats (Office, PDF etc.) can be attached to an article just as quickly.
- *Creation of structured data:* The documentation can be enriched with structured data (attributes) that can be processed inside and outside the system. (Semantic MediaWiki)
- *Page versioning:* The traceability and reproducibility of all changes in the documentation enable the management of legally required information and, if necessary, safeguard against liability.

Tour 2 [Integrated Management system](#)

next: [Process map](#)

An **Integrated Management System** (IMS) brings together various sets of rules that serve corporate governance. For example:

- Quality management (ISO 9001)
- Risk management (ISO 31000)
- Environmental protection and occupational safety management (ISO 14001 and ISO 45001).

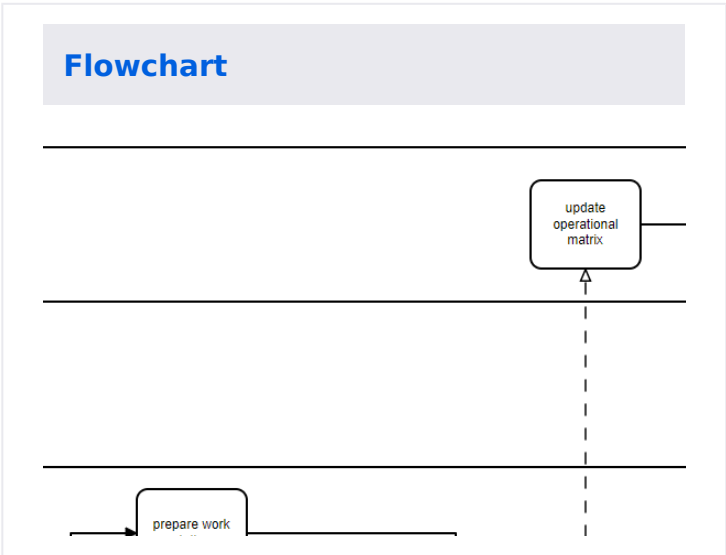

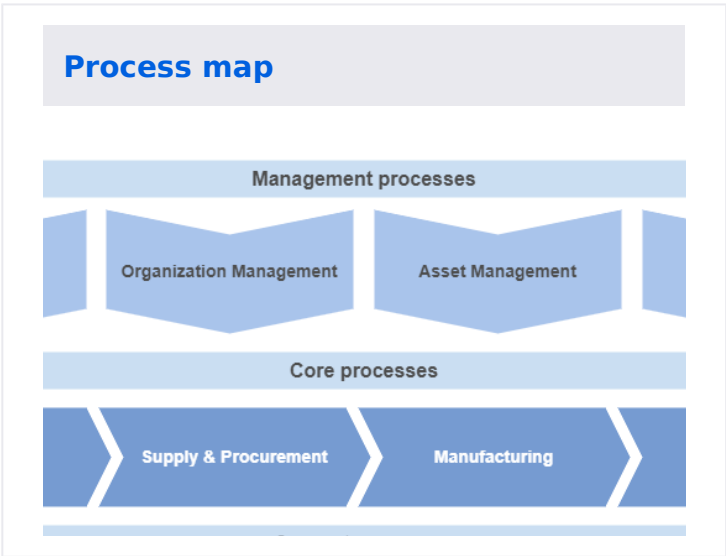

Management systems in a wiki

Wikis have established themselves as appropriate systems for the organization of management systems:

- *Central storage*: The rules and regulations are available centrally and online for all employees.
- *Search function*: Content can be quickly found via the search function and is perfectly pre-sorted via namespaces and categories.
- *Version-based editing*: Content can be edited and easily maintained in no time at all using a visual editor and forms.
- *Document control*: Templates, workflow and release functions ("control of documents") support the editorial processes.

A **knowledge base** is a place where the knowledge of an organisation, department, or team can be centralised. Employees collect their team and department knowledge and companies use it to provide an online helpdesk to answer frequently asked questions (FAQs) and share best practices.

Finally, you can find information about products, services, events, organisations, locations and partnerships.

Wikis as a knowledge base

Webinar: BlueSpice 4 (12:43)

Wikipedia and its sister projects are undoubtedly the most popular knowledge bases. Wikis are created to easily and collaboratively add or update knowledge dynamically.

Different contributions are quickly linked together. Over time, wikis become more valuable as the links become richer and more complex.

Wikis, and in particular the Wikipedia software MediaWiki, are designed to allow knowledge to be aggregated and individual wikis to be combined.

Introduction

With more than 165,000 inhabitants, Regensburg is the fourth-largest city in the State of Bavaria after Munich, Nuremberg and Augsburg.^[1]

The medieval centre of the city is a UNESCO World Heritage Site [\[2\]](#). In 2014, Regensburg was among the top sights and travel attractions in Germany.

Regensburg has three universities and is one of 3 regional centers in Bavaria.

Throughout the centuries, the city was known by a variety of names. It is still known in the Romance languages by a cognate of its Latin name of "Ratisbona" (the version "Ratisbon" was long current in English).

Between 1135 and 1146, the Stone Bridge across the Danube was built at Regensburg. This bridge opened major international trade routes between northern Europe and Venice, and this began Regensburg's golden age as a residence of wealthy trading families.

Regensburg became the cultural centre of southern Germany and was celebrated for its gold work and fabrics.

Geography

Topography

Regensburg is situated on the northernmost part of the Danube river at the geological crossroads of four distinct landscapes:

Tour 4 [Organization Manual](#)

next: [Organization Manual](#)

An **Organization Manual** is a structured summary of all regulations of a company. An organization Manual contains, for example, the company history, goals, definitions, organizational instructions and guidelines. If no separate [Quality Handbook](#) exists, the Organization Handbook can also contain all processes and work instructions.

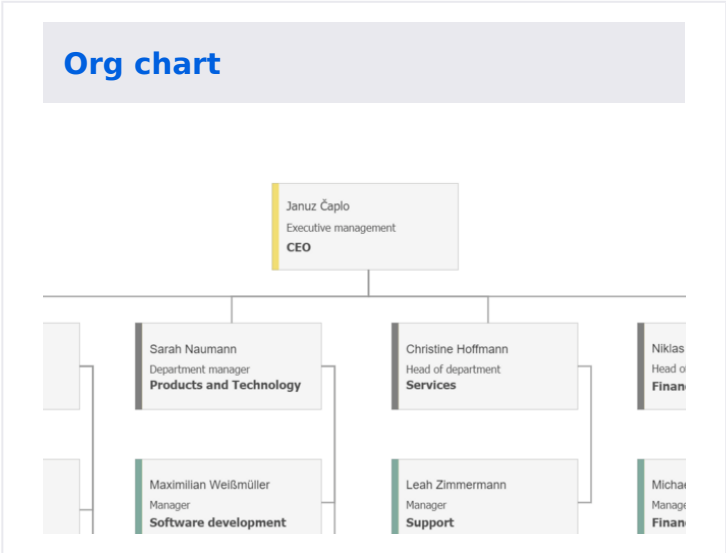

Organization Manual in a wiki

A Wiki is the ideal platform to provide and maintain an Organization Manual online:

- **Central point of entry:** The Wiki provides employees and employers with a central point of contact to look up uniform routine processes in their daily work:
 - Employees can use the search function to quickly find all important regulations.
 - The [notification system](#) keeps them informed of all new developments.
- **Legal requirements:** Pharmaceutical companies or banks, for example, must ensure that they have "access at all times to the standardized written processes, regulations, rules and organizational structures" of their company.
