Management Summary

YourCompany has organizational wikis.

The organization wikis vary in size, some have a size of only a few pages. About 5 wikis have a much larger size. All model company wikis have a total of about 400 users.

The following procedure has been defined:

- Users are currently managed by SAML. In addition, access to the individual wikis should be controlled via SAML.

Authentication and Security Levels

SAML/Prod

The following domains are all connected to SAML:

- wiki.yourcompany.com = Main Instance = WikiFarm Management
- wiki.yourcompany.com redirects to wiki.yourcompany.com/yourcompany= YourCompany Wiki
- wikidocs.yourcompany.com redirects to wiki.yourcompany.com/yourcompany with local login

Security levels of wikis

* = (all) = applies to every visitor of the wiki, including those who do not log in.

URL

If the URL of a wiki does not exist (or there is a letter error because of case-sensitivity), the user is currently redirected to the farm management. Depending on the authorization level, the user might not have access. It is possible to redirect the user to a page of another instance. However, this can only be done **once**. Redirects always link to the same instance. On the target page you could, for example, store an overview of operating wikis.
