Management Summary

YourCompany has organizational wikis.

The organization wikis vary in size, some have a size of only a few pages. About 5 wikis have a much larger size. All model company wikis have a total of about 400 users.

The following procedure has been defined:

- Users are currently managed by SAML. In addition, access to the individual wikis should be controlled via SAML.

Authentication and Security Levels

SAML/Prod

The following domains are all connected to SAML:

- wiki.yourcompany.com = Main Instance = WikiFarm Management
- wiki.yourcompany.com redirects to wiki.yourcompany.com/yourcompany= YourCompany Wiki
- wikidocs.yourcompany.com redirects to wiki.yourcompany.com/yourcompany with local login

Security levels of wikis

* = (all) = applies to every visitor of the wiki, including those who do not log in.

Public

user group	login required	permissions			
		sys admin	wiki maintain admin	editor	reader
[...] _Admin	x	x	x	x	x
*	---	---	---	x	x

Protected

URL

If the URL of a wiki does not exist (or there is a letter error because of case-sensitivity), the user is currently redirected to the farm management. Depending on the authorization level, the user might not have access. It is possible to redirect the user to a page of another instance. However, this can only be done **once**. Redirects always link to the same instance. On the target page you could, for example, store an overview of operating wikis.

Initial situation and requirements

YourCompany came to us in February 2017 to build a wiki system. MediaWiki was tested as an alternative and was not user-friendly enough. In addition, it lacked many functionalities of BlueSpice.

Installations

Technical notes for Maintenance and Support

- External Access: VPN
- Internal deployment notes: no special features
- Special processes (e.g.: maintenance cycles, cooperation partners, handling of the staging system, etc.): IT-Systemhaus is the main service provider

Marketing and Sales

- Special contractual arrangements (maintenance, framework contract): none
- Usable screenshots: none
